

## **Spatial Priorities Worksheet**

As the Cascadia Partner Forum embarks on a year of inventorying and reflecting spatial priorities throughout our landscape to help create a blueprint to draw attention to conservation and restoration efforts, we want to directly hear from people throughout this landscape to reflect your priorities and rationale in our inventory including creation of a data layer. Please email your completed worksheet to Jen Watkins at [jwatkins@conservationnw.org](mailto:jwatkins@conservationnw.org)

**What are the areas important to you or your organization for conservation, protection, and/or restoration in or adjacent to the Cascadia landscape?** These can be landscapes important for connectivity, species protection, river or watershed of focus, wilderness or park proposals, cultural reasons, or simply a focus of your organization at the given time. Name them and why on this sheet, and draw them to indicate location on the map below or any map of your choosing, use additional pages as necessary.

**Are there analyses, management plans, conservation plans, or other documents that you are aware of that identify spatial priorities within this landscape that we should reference?** If so, please list them below with any information you have to best direct us to them.
